4 1/4" (108 mm)
5" (127 mm)

Gloss level

Sigma 45
Available widths:
2 1/4" (57 mm)
2 3/4" (70 mm)
3 1/4" (83 mm)

Sigma 30
Available widths:
3 1/4" (83 mm)
4 1/4" (108 mm)
5" (127 mm)
Exotic species

Sigma 10
Wire-scraped™ finish
Available widths:
3 1/4" (83 mm)
5" (127 mm)

Features and benefits

- Largest selection of species and colors available on the market today
- Unique surfacing process
- Superior quality flooring
- High-quality varnish for extra long life
- Made in Canada
- Precision tongue-and-groove system and cut for perfectly adjusted strips
- Installation type: nailed

Stains and textures

Show your true colors!

They say there's no accounting for taste—or colors. That's how we justify for Preverco's incredible selection of available colors and textures. Take the time to look through our wide range of domestic hardwood and exotic species, and our rich assortment of stains and textures.

Preverco A business built on a solid foundation

Since its inception in 1988, Preverco has experienced extraordinary growth, driven by technological innovation and impeccable product quality.

This remarkable growth is a result of constant efforts to refine our production techniques. Our exclusive wood drying process, precision milling, and extremely durable stains and polymers are your guarantee of unmatched quality and wear resistance and enhance the natural beauty of our extensive product line. Today, Preverco is one of Canada's leading manufacturers of hardwood flooring.

Preverco also stands out for its first-rate management and high-energy team. It's no accident that the company has twice made the prestigious list of "Canada's 50 best managed companies." With a profile that speaks for itself, Preverco is clearly a company built on a solid foundation.

And wait till you see our product line. You'll find it irresistible!

Grades This time, appearances are not deceiving!

Wood is a natural product featuring a natural variation in color and knots that reflects the tree's age and history. To help consumers choose their floors, Preverco classifies boards by their "personality". Preverco classifies wood in six distinct grades based on selection criteria among the strictest in the industry.

Grades	Example using Hard Maple, Walnut and Beech
<p>"Select and Better" Selected for uniformity of color</p> <ul style="list-style-type: none"> • Wood is selected for uniformity of color, which must be paler and more uniform than that of other grades • Small sound knots up to 3 mm (1/8") in diameter are accepted • May have mineral streaks up to 2 mm x 76 mm (1/16" x 3") • Stains, checks, or splits are rejected 	<p>Hard Maple "Select and Better"</p>
<p>"Select" An intermediate grade between "Select and Better" and "#1 Common"</p> <ul style="list-style-type: none"> • Relatively uniform grade with slight color and shade variations • No extreme color variations • Walnut and cherry boards containing more than 15% sapwood are rejected • Wood generally used for staining 	<p>Hard Maple "Select" For stain</p>
<p>"#1 Common" A pleasing blend of natural wood colors</p> <ul style="list-style-type: none"> • Attractive blend of natural heartwood and sapwood colors • All color variations are accepted • Pronounced grain is accentuated by darker color • Small sound knots are accepted 	<p>Hard Maple "#1 Common"</p>
<p>"Select Extra" A harmonious blend of "Select and Better" and "#1 Common"</p> <ul style="list-style-type: none"> • Made up of 60 to 70% "Select and Better" and "Select", plus 30 to 40% "#1 Common" • Color variation is pronounced but with a distinct proportion of lighter boards • Mineral streaks are accepted 	<p>Beech "Select Extra"</p>
<p>"Character" A grade with character, for people with character</p> <ul style="list-style-type: none"> • Attractive blend of natural heart and sapwood colors • All color shades are acceptable in this grade • Pronounced grain is accentuated by its darker color • Knots up to 12.7 mm (1/2") in diameter may be filled with putty 	<p>Hard Maple "Character"</p>
<p>"Antique" A selection of contrasting colors and shades</p> <ul style="list-style-type: none"> • Characterized by pronounced color variation • Boards containing over 15% sapwood (light color) accepted • Mineral streaks accepted 	<p>Walnut "Antique"</p>
<p>Keep your guard up! Although grade names are similar from one manufacturer to the next, descriptions are not. Be careful and don't hesitate to compare appearance. Not everyone uses the same strict classification standards. Furthermore, the percentage of total production used for better grades is generally much higher elsewhere in the industry, which affects the overall appearance of the floor. You risk disappointment should the grades of other manufacturers fail to meet your expectations.</p>	

Character, Hard Maple, 5", Original™ Series

SIGMA™ Protection Defies time and resists wear

In recent years, Preverco has invested heavily in state-of-the-art technology that enables it to perfectly control every stage of the hardwood floor manufacturing process, from wood selection to finishing. The result is SIGMA™ Protection, the most durable protection there is. SIGMA™ combines a multitude of unique benefits.

Semi-gloss
Gloss level: 45 degrees

Satin
Gloss level: 30 degrees

Matte
Gloss level: 10 degrees

Extraordinary smoothness and clarity

- Ultra-satiny surface
- Unique multicoat finishing process
- Multiple hardened and microsanded coats

Antibacterial protection

- Prevents bacteria from multiplying in microfissures
- Resists mildew
- Starts to work with the first factory application
- Makes floors easier to maintain
- No risk for health

Controls bacteria

Controls mould

Controls mildew

Exceptional wear resistance

- Unbeatable durability
- Extremely high wear resistance
- Special finishing process with aluminum oxide and nanoparticles added

Superb UV protection

SIGMA™ incorporates the latest breakthroughs in UV protective resins to provide UV resistance that outperforms conventional finishes by far. QUV lab tests simulating exposure to UV and various climatic conditions clearly demonstrate that SIGMA™ considerably delays the onset of photochemical damage and yellowing.
